EDUCATION

San Jose State University

B.S. Data Science, GPA: 3.72

San Jose, CA

Expected May 2027

Cornell University | Machine Learning Foundations e-Certificate

May 2026 – Aug. 2026

EXPERIENCE

7-Eleven

Irving, TX

Break Through Tech AI Studio Fellow

Aug. 2026 – Present

- Selected for a Break Through Tech AI Studio team partnering with 7-Eleven on an industry-sponsored AI challenge.

SAP America, Inc.

Palo Alto, CA

AI Software Developer Intern

Jun. 2026 – Aug. 2026

- Built an AI-powered Python CLI converting natural language into structured JIRA tickets across 6 workstreams, managing 700+ tickets with zero rate-limit failures through custom throttling and retry logic.
- Reworked the agent's system prompt and tool definitions, cutting token usage per invocation by roughly 70%
- Developed an Ansible playbook to reconcile NetBox and vCenter host status for a maintenance-mode edge case, closing a data-accuracy gap in infrastructure monitoring.

AGENTIS

San Jose, CA

Co-Founder & AI Engineer

Feb. 2026 – Aug. 2026

- Co-founded a clinical trial-matching platform integrating IBM watsonx.ai and the ClinicalTrials.gov API to automate patient-to-trial eligibility screening and ranking.
- Built Python backend workflows to retrieve trial data, evaluate patient eligibility, and rank candidate trials by relevance.
- Designed modular validation components that transform raw external API data into interpretable recommendations.

PROJECTS

AutoPilot AI | Next.js, React, TypeScript, NVIDIA Nemotron, Holo, Docker

- Built a multi-agent automotive service advisor coordinating vehicle diagnosis, live parts sourcing, and budget-aware repair planning through an AI-driven decision workflow.
- Integrated NVIDIA Nemotron with a computer-use agent to retrieve live replacement-part data and generate repair recommendations from real-time context.
- Engineered schema validation, deterministic fallbacks, and human-in-the-loop approval controls to improve reliability and governance of autonomous agent actions.

Acron | Python, Flask, SQLite, sqlite-vec, SentenceTransformers, OpenRouter

- Built a Python code intelligence system that indexes GitHub repositories and supports natural-language codebase exploration.
- Developed an indexing pipeline to parse source files, generate embeddings via SentenceTransformers, and persist structured metadata in SQLite.
- Designed a relational SQLite schema with sqlite-vec vector indexes to support fast, scalable source-level retrieval.

ContextMeter | React, TypeScript, Express, Gemini, Docker

- Built a full-stack platform for evaluating and optimizing AI agent context before model inference.
- Developed React/TypeScript interfaces and Express backend services for processing evaluations and comparing structured results.
- Implemented deterministic, heuristic, and AI-assisted validation workflows to improve system reliability and reproducibility.

LEADERSHIP & ACTIVITIES

Break Through Tech | Fellow

May 2026 – Present

- Selected from a pool of 4,300+ applicants for a competitive, technical 12-month AI program with Break Through Tech.
- Completing Machine Learning coursework, technical projects, mentorship with industry professionals, and professional development workshops on topics including leadership, project management and career success

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL, HTML, R

AI/ML: TensorFlow, LangChain, IBM watsonx.ai, NVIDIA Nemotron, SentenceTransformers, RAG, embeddings

Systems & Backend: FastAPI, Flask, Node.js, Express, REST APIs, Linux

Frontend: React, Next.js, Streamlit

Tools: Docker, Kubernetes, IBM Cloud, Git, GitHub Ansible, PostgreSQL, MySQL, SQLite
